

CHASSIS 2011

Exprit is going to present, for year 2011, new interesting developments in its chassis range. Such improvements, on the base of the successful commonly used models, are the result of the last technological newness developed by our factory.

The new Exprit model is named Noesis MY11.

KF MODELS

KF category's models will be provided with one-piece bearing carrier supports. By the same standards of the previous model, the current design has not been modified. This innovation is giving the chassis a stronger structural stiffness.

2010 Model

2011 Model

The new aluminium bearing carriers offer a major number of fixing points for the seat brackets. By this technical solution the seat's adjustment range is remarkably widened.

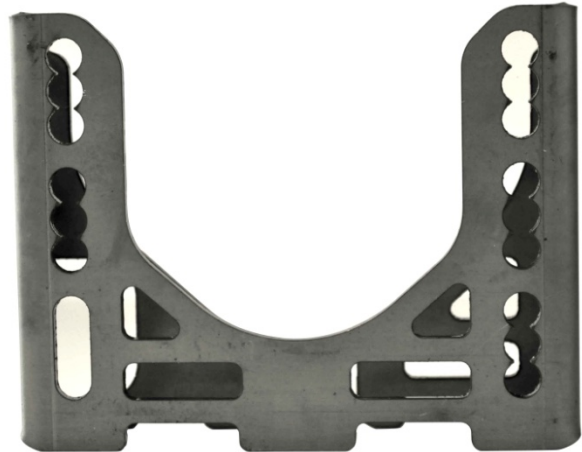

KZ MODELS

Bearing carrier supports: of a new design, higher than the previous ones and specifically conceived for the gearbox categories,

2010 Model

2011 Model

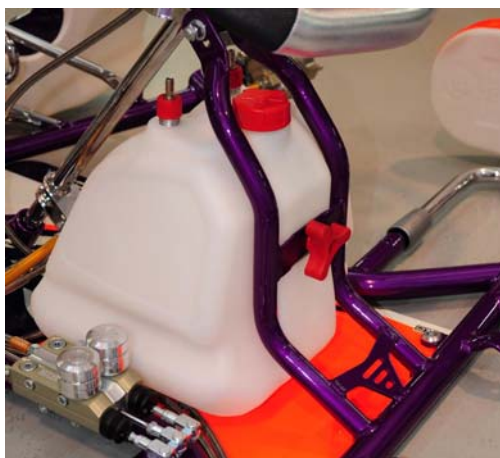

The new bearing carrier supports allow more vertical axle adjustments.

TANKS

The common innovation in this chassis range (both KF and KZ categories) is regarding the tank: the new model is more compact and flat, further lowering the whole chassis barycenter and thus improving its weight distribution.

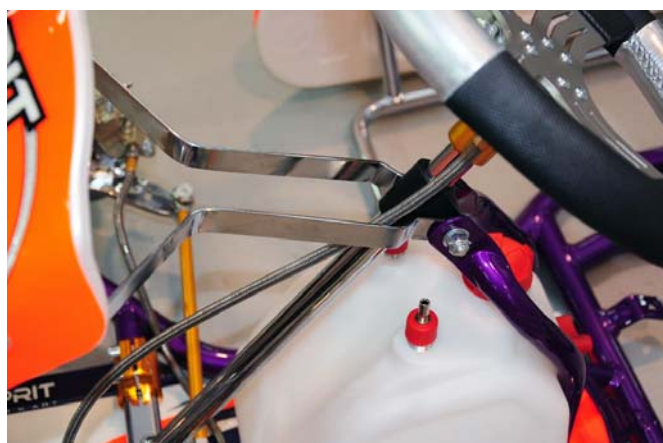

Right after the implementation of the new tank model is the innovation of the steering column supports.

Optimization of any single part has also involved the steering column lower support, whose structure allows now to move the foot support without altering its distance from the floor plate.

Innovations also regard the front upper spoiler supports.

STEERING WHEELS

The latest steering wheel presents a specific design, with a higher diameter than the previous model, facilitating the driver while steering. Furthermore the high-adherence tissue covering allows a better grip thanks to the 4 spokes and its oval shape too.

The spoke structure also allows the easiest adjustment of all data system loggers in accordance with their better visibility position.

SUPPORTO PI

SUPPORTO AIM, UNIPRO

The new 2011 chassis will be available starting from November 2010; orders can be placed already.
